The PGFL series is a range of 532nm pulsed fiber lasers, delivering high peak power and high energy per pulse in compact modules with diffraction-limited output beam for range finding applications. Green Lasers are commonly used for underwater operations for mapping and 3D scanning applications.

The optical design consists in a 1064nm fiber laser connected to a high-efficiency second-harmonic generator. Compared to other technologies, the innovative optical architecture offers a better electrical-trigger to optical-pulse delay jitter and an excellent pulse duration stability allowing to enhance the performance of user system.

The laser modules incorporate a microcontroller for internal controls, alarms, and RS232/USB communication making the laser compatible with all systems. Pulses are triggered by an external signal supplied by the user system.

The rugged module can work in the most stringent environments. Moreover, its light weight and its low power consumption are a big advantage for integrations on drones.

**Key features**
- Energy per pulse up to 50 µJ
- Peak power up to 12 kW
- Average power up to 1.8 W
- Pulse repetition frequency from 15 kHz to 50 kHz
- Diffraction limited output beam
- Low power consumption
- Compact and rugged package

**What applications**
- Environment monitoring
- Underwater telemetry
- Underwater range-finding
- 3D scanning
- Mapping

The PGFL is available as OEM module

---

**RELIABILITY**

The Lumibird range of fiber lasers are manufactured with tested components and are submitted to several inspections during the manufacturing process under a rigorous quality management certified in accordance with the ISO 9001:2015 standard. Our all-in-fiber systems offer maintenance-free operation. Countless units are continuously running in demanding environments with no failure.

---

**GUARANTEE**

Our fiber systems are under 1 full year parts and labor warranty. We offer a warranty extension of 1 or 2 years. Please contact us.
